# High Quality **RGB** Scart Lead For The Commodore **Amiga** All Models

**1** mtr  
**LONG**

**2mtr & 3mtr Leads also available**

For ALL models of Commodore Amiga Computer, A500, 600, 600HD, 1000, 1200, 1200HD, 1500, 2000, 3000, 4000

The Amiga **RGB** Scart lead, is a high quality video lead, that allows you to connect your Commodore Amiga Computer, to a TV, via the **RGB** Scart socket, to display a superb full colour **RGB** picture with stereo sound (requires a stereo TV).

**This type of lead, gives the best quality picture possible with this Computer.**

This lead is professionally made using high quality materials and workmanship. Made from high quality foil screened thick wall video cable, fitted with a high quality gold plated Scart plug and a genuine 23 pin Amiga video connector. Lead is 1mtr long. auto **RGB** & A/V switching on most TV's. Additional components are fitted inside the Scart plug, to provide the best quality picture.

## **THIS LEAD IS FITTED WITH A GENUINE 23 PIN AMIGA VIDEO CONNECTOR**

All my Amiga Scart leads are fitted with a genuine 23 pin Amiga video connector, this is the only type of connector, that is designed for and fits the Amiga perfectly. Some other sellers are using a cut down 25 pin connector, which isn't designed for the Amiga, and doesn't fit properly. **If the seller doesn't state they are using a Genuine 23 pin video connector, then it's likely they will be using a cheaper cut down 25 pin connector.**

### **INSTRUCTIONS**

1. Switch **OFF** the Amiga Computer and TV.
2. Connect the Scart lead to the Amiga Computer and TV.
3. Connect the **Red & Black Phono plugs** into the audio out of the Amiga.
3. Switch **ON** the TV, and Amiga Computer.

I would always recommend using a old style CRT type TV or Monitor, for all retro Computers and Games consoles, as they will always produce the best quality picture. As with All Amiga RGB Scart leads, Some makes and models of LCD, LED & Plasma TV's may not display as good a picture, **but most work perfectly with this lead.**

### **IMPORTANT PLEASE READ. USING VIDEO CONVERTERS!**

I can't offer any support, when using this lead with any Video Converters, or adapters, as these are often very difficult to get working with Retro Computers. This lead is designed for, tested and sold for use only with a TV or Monitor with a **EURO, RGB** Scart socket.
