High Quality RGB Scart Lead
For The Commodore Amiga All Models

1 mtr LONG

For ALL models of Commodore Amiga Computer, NOT FOR THE CD32 GAMES CONSOLE
A500, A500 Plus, A600, A600HD, 1000, A1200, A1200HD, 1500, 2000, 3000, 4000

This Amiga RGB Scart lead, is a high quality video lead, that allows you to connect your Commodore Amiga Computer, to a TV, via the RGB Scart socket, to display a superb full colour RGB picture with stereo sound (requires a stereo TV). **This type of lead, gives the best quality picture possible with this Computer.**

This lead is professionally made using high quality materials and workmanship. Made from high quality foil screened thick wall video cable, fitted with a high quality Gold Plated Scart plug and a genuine 23 pin Amiga video connector. Auto RGB & A/V switching on most TV's. Additional components are fitted inside the Scart plug, to provide the correct signal levels, and produce the best quality picture possible.

THIS LEAD IS FITTED WITH A GENUINE 23 PIN AMIGA VIDEO CONNECTOR
All my Amiga Scart leads are fitted with a genuine 23 pin Amiga video connector, this is the only type of connector, that is designed for and fits the Amiga perfectly. Some other sellers are using a cut down 25 pin connector, which isn't designed for the Amiga, and doesn't fit as well.
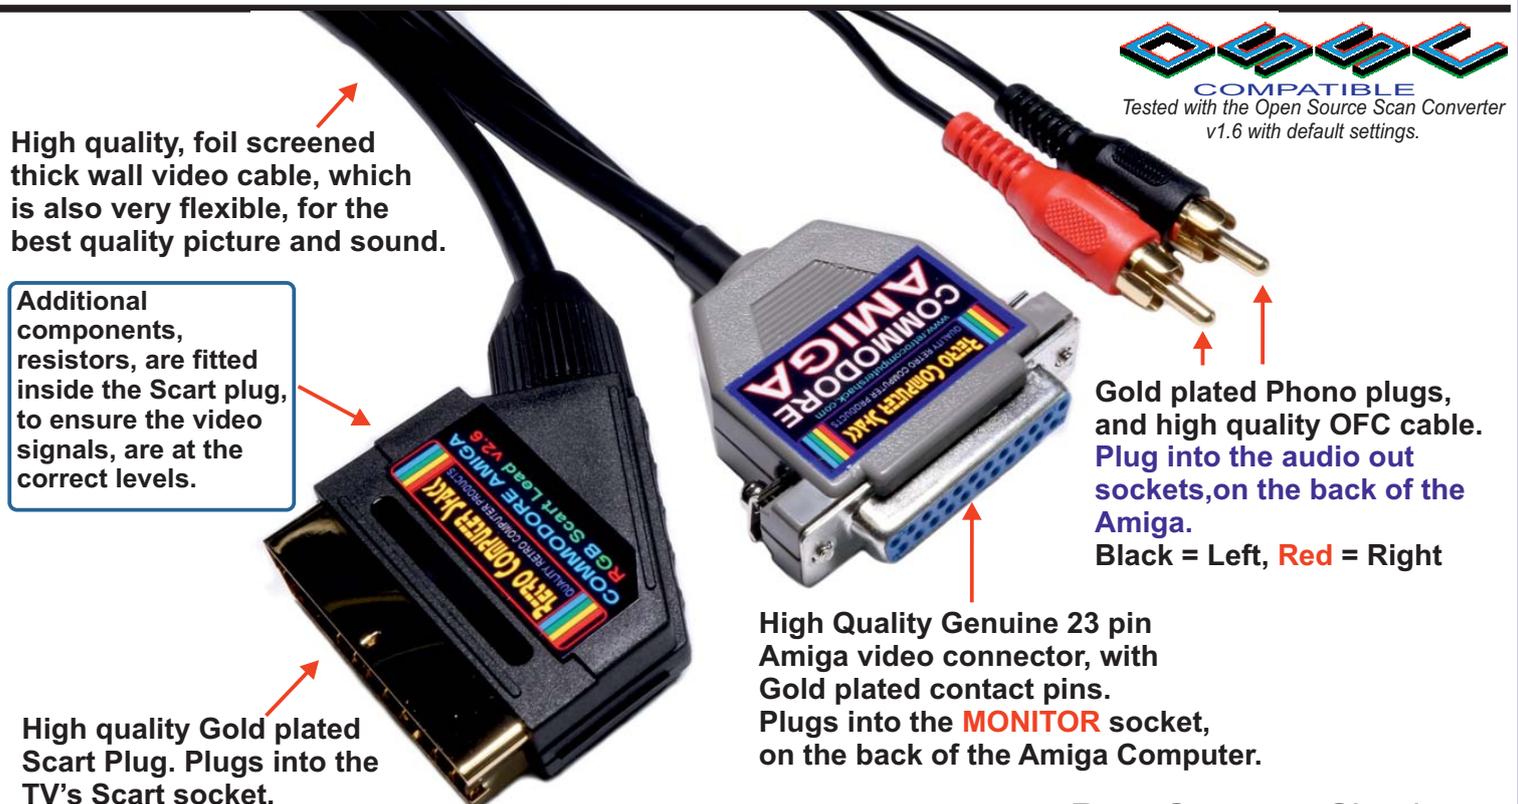

INSTRUCTIONS
1. Switch **OFF** the Amiga Computer and TV.
2. Connect the Scart lead to the Amiga Computer and TV.
3. Connect the **Red & Black Phono plugs** into the audio out of the Amiga.
3. Switch **ON** the TV, and Amiga Computer.

I would always recommend using a old style CRT type TV or Monitor, for all retro Computers and Games consoles, as they will always produce the best quality picture. As with All Amiga RGB Scart leads, Some makes and models of LCD, LED & Plasma TV's may not display as good a picture, **but most work perfectly with this lead.**

IMPORTANT PLEASE READ. USING VIDEO CONVERTERS!
I can't offer any support, when using this lead with any Video Converters, or adapters, as these are often very difficult to get working with Retro Computers. This lead is designed for, tested and sold for use only with a TV or Monitor with a EURO, RGB Scart socket.

OSSC COMPATIBLE
Tested with the Open Source Scan Converter v1.6 with default settings.

High quality, foil screened thick wall video cable, which is also very flexible, for the best quality picture and sound.

Additional components, resistors, are fitted inside the Scart plug, to ensure the video signals, are at the correct levels.

Gold plated Phono plugs, and high quality OFC cable. Plug into the audio out sockets, on the back of the Amiga. Black = Left, Red = Right

High Quality Genuine 23 pin Amiga video connector, with Gold plated contact pins. Plugs into the MONITOR socket, on the back of the Amiga Computer.

High quality Gold plated Scart Plug. Plugs into the TV's Scart socket.
